SUMMARY

Backend developer with experience building and maintaining server-side systems using Python, Django, Java, REST APIs, and MySQL. I have worked on backend services for client-facing web applications, built data pipelines that process 30,000+ healthcare records, and integrated third-party APIs into production workflows. Comfortable writing unit and integration tests, debugging live issues from logs, and shipping through CI/CD pipelines. MSc in Computer Science from University College Dublin. Interested in digital health and building software that helps patients stick to their treatment.

TECHNICAL SKILLS

- **Programming Language:** Python, Java, JavaScript, SQL
 - **Backend and Frameworks:** Django, Django REST Framework, Spring Boot, Microservices
 - **Databases:** MySQL, PostgreSQL, SQL query optimisation, Schema design, Django ORM, Data validation
 - **Testing:** pytest, unittest, Unit testing, Integration testing, Test automation, Postman, JUnit
 - **DevOps & Cloud:** CI/CD (GitHub Actions), Docker, Kubernetes, Git, AWS (S3, Lambda, Glue, Athena, IAM)
 - **Data:** ETL pipelines, PySpark, Pandas, Parquet, Data quality checks
-

PROFESSIONAL EXPERIENCE

Software Developer (Contract) | Artemee Solutions

June 2026 – Present

Dublin, Ireland

- Build and maintain backend services and REST APIs in Python and Java that handle business logic and data processing for client-facing applications.
- Design database schemas and write SQL queries against MySQL, including indexing and query changes that cut response times on slow endpoints.
- Integrate third-party APIs into backend workflows, handling authentication, rate limits, retries, and error responses so failures do not break the wider system.
- Write unit and integration tests for new endpoints and business logic, and keep test coverage in place as features change.

Software Engineer Intern | Frontier AI

May 2026 – Aug 2026

Dublin, Ireland

- Built Python backend services for an internal document-processing platform, covering data ingestion, validation, and processing logic.
- Integrated external APIs and model services into the backend, adding input validation, output checks, and fallback handling so bad responses were caught before they reached users.
- Cut bug escape rate by 70% by adding structured release testing, reproducing reported defects, covering edge cases with tests, and verifying every fix before it went to production.
- Added structured logging and error handling across processing workflows, which made live issues faster to trace and fix.
- Worked with product and engineering colleagues to agree priorities and document how the system worked for the rest of the team.

Software Development Intern | Autuskey Pvt. Ltd

Nov 2024 - Aug 2025

Pune, India

- Developed backend features and business logic for a 160+ page client-facing web application using Java, Spring Boot, REST APIs, and MySQL.
 - Designed and maintained REST APIs that carried data between multiple modules of the application, keeping request and response formats consistent.
 - Wrote server-side validation across customer-facing forms, which reduced invalid submissions and cut data-accuracy errors reaching the database.
 - Debugged production API issues by reading application logs, reproducing the problem locally, testing edge cases, and shipping fixes.
 - Wrote unit and integration tests for backend services and took part in code reviews with the wider development team.
-

PROJECTS

Medication Adherence Tracker

Feb 2026 – Mar 2026

- Built a backend service in Django and Django REST Framework that lets patients log medication doses and lets clinicians view adherence over time.
- Modelled patients, prescriptions, dose schedules, and dose events in MySQL using the Django ORM, with migrations and constraints to keep data clean.
- Built REST endpoints for creating schedules, recording doses, and returning adherence summaries, with token authentication and role-based permissions so patients only see their own records.
- Wrote unit and integration tests with pytest and pytest-django covering models, permissions, and API responses, and ran them automatically on every push using GitHub Actions.
- Followed GDPR-aware practices: stored the minimum personal data needed, kept audit logs of record access, and used environment variables for all secrets and credentials.

Cloud-Based Healthcare Data Service

Oct 2025 – Nov 2025

- Built a Python data pipeline that ingests, validates, transforms, and analyses 30,000+ healthcare records using AWS and PySpark
- Wrote ETL logic with schema validation, transformation rules, and partitioned Parquet storage, which cut average query time by around 30%.
- Ran SQL analysis in Amazon Athena to check processed data and find trends across large record sets.
- Added data-quality checks and error handling so bad records were flagged and quarantined instead of silently corrupting downstream results.
- Built dashboards to confirm outputs were correct and to share findings with non-technical readers.

EDUCATION

MSc – Computer Science (Negotiated Learning) | University College Dublin

GPA: 3.20/4.2

2025 - 2026

Relevant Modules: Distributed Systems, Cloud Computing, Data Science in Python

BE – Computer Engineering | MMIT

CGPA: 8.6/10

2021 - 2024

Relevant Modules: Software Engineering, Data Structure and Algorithms, Database Management Systems

ACHIEVEMENTS

- **President, Student Association:** Led 25+ team members organising technical events across student groups, increasing student engagement by 40%.
