---

## SUMMARY

Software Engineer based in Dublin, Ireland with experience building and shipping production software using C++, Python, Java and backend technologies. Strong foundation in data structures, algorithms, object-oriented programming, distributed systems, debugging and software development. Experienced in developing REST APIs, investigating production issues, handling edge cases, automated testing and improving application reliability. MSc Computer Science graduate with a Computer Engineering background and a strong interest in systems, networking and solving complex engineering problems.

---

## TECHNICAL SKILLS

- **Programming Languages:** Python, C++, Java, C, SQL, JavaScript
  - **Systems & Linux:** Linux, Multithreading, Concurrency, Processes, Memory Management, System Programming
  - **Networking:** TCP/IP, Routing, Switching, Layer 2, Layer 3, BGP, OSPF, DNS, HTTP/HTTPS
  - **Backend Development:** REST APIs, Spring Boot, Microservices, Client Server Architecture, Database Integration
  - **Databases:** PostgreSQL, MySQL, SQL, Database Design
  - **Testing & Debugging:** Automated Testing, Unit Testing, Integration Testing, Regression Testing, Debugging, Edge Case Testing, Fault Isolation
  - **Tools & DevOps:** Git, GitHub, Docker, CI/CD, Postman
- 

## PROFESSIONAL EXPERIENCE

### Software Engineer (Contract) | Artemee Solutions

June 2026 – Present

*Dublin, Ireland*

- Developed and released two customer facing Android applications, Share Your Wear and Match Your Fit, now available on the Google Play Store.
- Built application features using Dart and integrated REST APIs and PostgreSQL backed services to support production user workflows.
- Took software features from requirements through development, testing, debugging and production release.
- Investigated production issues, handled edge cases and improved application reliability through structured debugging and validation.
- Developed and integrated backend functionality and APIs to support communication between mobile applications and application services.

### Software Engineer Intern | Frontier AI

May 2026 – Aug 2026

*Dublin, Ireland*

- Built internal GenAI tooling that reduced manual document-review time by **45%**, integrating LLM and retrieval-based workflows into an existing document-processing platform.
- Reduced bug escape rate by **70%** by reproducing production defects, testing edge cases, validating fixes, and owning release-quality verification.
- Improved reliability of AI-driven workflows by adding input validation, output checks, fallback handling, and failure management, reducing invalid outputs by **60%**.
- Delivered React and Next.js components while working with product and engineering stakeholders to define release scope and expected user behaviour.

### Software Development Intern | Autuskey Pvt. Ltd

Nov 2024 - Aug 2025

*Pune, India*

- Resolved **15+ production API defects** by analysing application logs, reproducing edge cases, debugging failures, and verifying fixes before release.
  - Developed backend features and business logic for a **160-page customer-facing application** using Java, Spring Boot, REST APIs, and MySQL.
  - Designed and maintained REST API contracts across **6+ application modules**, keeping request handling, validation, and data flows consistent as the product grew.
  - Reduced invalid customer form submissions by **35%** across 12+ forms through server-side validation and clear error handling.
  - Optimised database queried and data-access logic for high-traffic endpoints, reducing average API response time by 30%.
-

## PROJECTS

### Software Release Reliability and Failure Analysis Platform

Feb 2026 – Mar 2026

- Built a software reliability platform in Python to analyse CI/CD build logs, automated test results and deployment events and identify recurring failures before production release.
- Developed data processing and failure classification pipelines to normalize software telemetry and detect recurring patterns across historical builds and test executions.
- Implemented automated testing, structured logging, exception handling and fault analysis to improve system reliability and simplify debugging.
- Developed REST APIs to expose build health, test failures, recurring defects and release risk information to other application components.
- Used failure history and similarity analysis to group related incidents and identify likely root causes, reducing the manual effort required to investigate repeated software failures.

### Cloud-Based Healthcare Data Service

Oct 2025 – Nov 2025

- Designed an AWS pipeline that ingests, validates, and transforms 30,000+ records using S3, Glue, Lambda, and PySpark, scaling without changes to the processing logic.
- Reduced average query execution time by 30% and lowered scan costs by partitioning output into Parquet, so queries read only the partitions they needed.
- Caught 98% of malformed records before they reached analytics by adding schema validation and transformation checks at each stage of the ETL flow.
- Containerised the record validation service and ran it on Kubernetes, using health checks and automatic restarts so a crashed pod recovered without stopping the pipeline run.
- Monitored data quality and validated outputs through Athena SQL analysis and QuickSight dashboards across the full record set

---

## EDUCATION

MSc – Computer Science (Negotiated Learning) | University College Dublin

Grade - 2:1

2025 - 2026

Relevant Modules: Cloud Computing, Distributed Systems, Data Science in Python

BE – Computer Engineering | MMIT

CGPA – 8.66

2021 - 2024

Relevant Modules: Software Engineering, Data Structure and Algorithms, Computer Networks

---

## ACHIEVEMENTS

- **President, Student Association:** Led 25+ team members in organizing technical events across student groups, increasing student engagement by 40%.
